## Abstract

**SmartCampus – AI-Powered Student Assistance & Management Platform** is a smart educational management system designed to simplify and enhance various academic and administrative activities within a campus. It provides students with a centralized interface to access academic information, campus services, announcements, attendance records, schedules, and personalized assistance. The system integrates **Artificial Intelligence (AI)** and **Machine Learning (ML)** to deliver intelligent student support, including answering common academic queries, offering personalized recommendations, and helping students easily access relevant campus resources. The backend is developed using **Java** and **Spring Boot**, with **PostgreSQL** ensuring secure and efficient data management. **React.js** is used to create a responsive and user-friendly frontend, while **REST APIs** enable smooth communication between different modules. **Python** and **Machine Learning** components further support the AI-based features. By combining academic management, student assistance, and intelligent services into a single platform, SmartCampus reduces manual processes, improves access to campus resources, enhances communication between students and administrators, and delivers a more efficient and personalized **digital campus experience**.
